Everyday Robots

Our project is named Everyday Robots. In our project we give examples of robots that we use throughout our day that we may not realize are robots. We have made a slide show through power point that explains how these things we have picked are robots and how they work. We are presenting nine different robots. This includes a self- propelled toothbrush, the robots that package food and make clothes, automatic toilets, automatic doors, a garbage truck, a stand mixer, a dishwasher, and a garbage disposal. We have split the presentations into three areas: robots that are used in the morning, afternoon and evening. We have also made a poster presenting the name of our project. Our plan is to set up the slide show on or presentation table and have it continually run through our slide show. We will also set up our bright poster to attract on-lookers.
