Bungee Botguy and All Things Rubber Band Powered

Botguy wanted to become more adventurous so he decided to learn how to bungee jump. He did research on the internet and discovered all about bungee cords and the science behind them. But when the big day came, he was too scared to step off the platform. He asked our Botball team to create an automated device to help him take the plunge, and we did. We wanted to give him the thrill of a lifetime but keep him as safe as possible. Come see our bungee jumping Botguy.

We learned all about rubber bands and devices powered by them. We even incorporated the idea into our Botball game strategy. We created a rubber band powered device that is capable of scoring 9 points and creating a blocking device for the opponent's bridge. It took several tries to get it to work successfully. See how it works.

The first attempt.

A successful idea.
